CANVASSs Co., Ltd.

"G1_Lock" Officially Adopted by a Leading Global Video Streaming Platform.

Adopted by major Japanese production companies, establishing new standards.

CANVASSs Inc. (Chiyoda-ku, Tokyo / President and CEO: Seiji Fukuhara), a company specializing in video subtitling services, is pleased to announce that its video encryption software "G1_Lock" has been officially adopted by one of the world's largest video streaming platforms.

As a result, several major production companies in Japan have decided to adopt "G1_Lock".

Video Encryption Software

G1_LOCK

Exclusively for subtitling in SSTG1 series

■ **Urgent demand for stronger video content security.**

In recent years, the unauthorized use and theft of video content have become increasingly serious worldwide. Illegal copying and unauthorized distribution not only infringe on creators' rights but also deprive legitimate businesses of opportunities, becoming a major factor hindering the healthy development of the entire industry.

Given this situation, strengthening security measures has become an urgent priority for the industry involved in video production and distribution. For companies operating international platforms in particular, implementing reliable security solutions is essential.

■ **CANVASSs's "G1_Lock" recognized by one of the world's largest video streaming**

platforms.

G1_Lock, the video encryption software developed by CANVASs, is security software specifically designed for subtitle production of video content. It integrates with SSTG1, Japan's top-ranked subtitle production software, enabling a smooth and rapid transition to a secure subtitle production environment and low-cost environment setup.

The key features of "G1_Lock" are its strict conditions for opening video files and its anti-camera theft function using randomly displayed watermarks.

▶ **To open the video file, specific requirements must be met.**

To open a video file, all of the following conditions must be met.

- **For the SSTG1 series, use specific software (such as SSTG1Pro).**
- **Opening video files using software launched with the specified user's dongle.**

Even if the user ID is leaked, the files cannot be opened without the specified dongle.

- **Only open video files within the specified number of PCs.**

You can specify the number of PCs that can open the file and encrypt it accordingly.

- **Within the specified period.**

Even if you forget to delete the footage or lose your PC, the video files will be protected.

▶ **The position of the watermark moves randomly.**

When opening video files encrypted with "G1_Lock" on SSTG1, watermarks displaying the user ID and playback date/time will automatically appear. The position of this watermark moves randomly, making it extremely difficult to remove or alter the watermark from the

footage even if the screen is secretly recorded.

Additionally, "G1_Lock" features the following capabilities, enabling comprehensive security protection during subtitle production—a critical step in the workflow from video creation to distribution.

- ▶ **Implemented anti-capture functionality.**
- ▶ **Encryption is possible in a short time.**
- ▶ **Decrypted only while open in the SSTG1 series.**

These features have been highly praised, earning the trust of one of the world's largest video streaming platforms, and have now been officially adopted.

■ **Major Japanese production companies have decided to adopt "G1_Lock".**

These major production companies are responsible for producing and distributing numerous video works, playing a vital role in supplying content both within Japan and internationally.

The introduction of "G1_Lock" will establish a more robust and reliable security environment within the subtitle production workflow than ever before. This is expected not only to strengthen the protection of creators' rights and prevent unauthorized use of content, but also to contribute to the sustainable development of Japan's entire video industry.

Furthermore, the fact that major production companies representing Japan have successively decided to adopt it reaffirms the effectiveness and reliability of "G1_Lock".

Going forward, it is expected to become even more widely adopted as the standard security solution in Japanese video production environments.

CANVASSs will continue to provide innovative security solutions as a pioneer in subtitle production, contributing to the development of the video production industry not only in Japan but globally.

Additional Information

[About CANVASSs] <https://canvass.co.jp/en/>

For over 25 years since our founding, we have specialized in subtitling services. In addition to developing and selling subtitling software like the "SSTG1 Series," dubbing script creation support software "SSTG1Dub," and audio description script software "Descra," we provide comprehensive consulting services for adding subtitles and audio descriptions to all types of video content, including films, television, streaming video, DVDs, and Blu-rays.
